

## **HEDIS® Measures 2018 Tips: Cervical Cancer Screening (CCS)**

### **Measure Description**

Patients 21-64 years of age who were screened for cervical cancer using either of the following criteria:

- Women 21-64 years of age who had cervical cytology performed during 2018 or two years prior.
- Women 30-64 years of age who had cervical cytology/human papillomavirus (HPV) co-testing performed during 2018 or four years prior.

### **Exclusions**

Patients who had a hysterectomy with no residual cervix, cervical agenesis or acquired absence of cervix any time during the member's history through December 31 of the measurement year.

### **How to Improve HEDIS® Documentation**

Review missing services list to identify patients who are due for a Pap and/or an HPV test

- Document date of Pap/HPV testing along with results of the testing. HEDIS® requires they both be collected on the same date to meet compliance.
- Complete a Pap test during regularly scheduled well-woman visits, sick visits, urine pregnancy tests, UTI, and chlamydia/STI screenings, when appropriate.
- Document in the medical record if the patient has had a hysterectomy with no residual cervix. Synonyms – “total”, “complete”, and “radical” are all compliant.
- Use diagnosis codes to report exclusions. Correctly coding these conditions may prevent medical record requests.

Common challenges related to this measure include lack of documentation regarding the cervical cancer screening results and hysterectomy documentation regarding presence or absence of the cervix.
